

Thực hành React – xây
dựng form nhập liệu để
thêm sinh viên mới

```
function NewStudentForm({ onAddStudent }) {  
  const [lastname, setLastname] = useState('');  
  const [firstname, setFirstname] = useState('');
```

```
return (  
  <div>  
    <h2>Add New Student</h2>  
    <div className="form-group">  
      <label>Lastname</label>  
      <input  
        type="text"  
        className="form-control"  
        value={lastname}  
        onChange={e => setLastname(e.target.value)}  
      />  
    </div>  
    <div className="form-group">  
      <label>Firstname</label>  
      <input  
        type="text"  
        className="form-control"  
        value={firstname}  
        onChange={e => setFirstname(e.target.value)}  
      />  
    </div>  
    <button className="btn btn-primary" onClick={handleSubmit}>Add Student</button>  
  </div>  
>  
);  
}  
  
export default NewStudentForm;
```

```
const handleSubmit = () => {  
  if (lastname && firstname) {  
    props.addStudent(lastname, firstname);  
    setLastname('');  
    setFirstname('');  
  } else {  
    alert('Both Lastname and Firstname are required.');
```

```
const addStudent = (lastname, firstname) => {  
  const newStudent = {  
    id: (students.length + 1).toString(),  
    lastname: lastname,  
    firstname: firstname  
  };  
  setStudents([...students, newStudent]);  
  console.log("Added new student:", newStudent);  
};
```

```
<NewStudentForm addStudent={addStudent} />
```
