

Thực hành React tách React Components

```
import React from 'react';

function StudentItem(props) {
  const { student } = props;

  return (
    <tr>
      <td>{student.id}</td>
      <td>{student.lastname}</td>
      <td>{student.firstname}</td>
    </tr>
  );
}

export default StudentItem;
```

```
import React from 'react';
import StudentItem from './StudentItem';

function StudentsTable(props) {
  const students = props.students;

  return (
    <div className="card">
      <div className="card-header">
        <h1>Danh sách sinh viên</h1>
      </div>
      <div className="card-body">
        <table className="table table-bordered table-striped">
          <thead>
            <tr>
              <th scope='col'>Mã sinh viên</th>
              <th scope='col'>Họ đệm</th>
              <th scope='col'>Tên</th>
            </tr>
          </thead>
```

```
import React from 'react';
import './App.css';
import StudentsTable from './components/StudentsTable';

function App() {
  const students = [
    { id: "4****", lastname: "Đào Thị Phương", firstname: "Lan" },
    { id: "5****", lastname: "Nguyễn Văn", firstname: "A" },
    // ...Thêm danh sách sinh viên khác
  ];

  return (
    <div className="container mt-4">
      <StudentsTable students={students} />
    </div>
  );
}

export default App;
```
